

Smart Grid Standards Information

Version 1.7 Tuesday, August 17, 2010

Section I: Use and Application of the Standard				
Ide	Identification and Affiliation			
	Number of the standard	ANSI/IEEE Std 802.2-1998, ISO/IEC 8802-2:1998		
	Title of the standard	Local and metropolitan area networks—Specific requirements		
	Name of owner organization	IEEE		
	Latest versions, stages, dates	Release by IEEE, 1998		
	URL(s) for the standard	http://standards.ieee.org/		
	Working group / committee	IEEE Computer Society, LAN/MAN Standards Committee		
	Original source of the content (if applicable)	IEEE		
	Brief description of scope	This standard deals with the physical and data link layers as defined by the ISO Open Systems Interconnection Basic Reference Model. The functions, features, protocol, and services of the Logical Link Control (LLC) sublayer, which constitutes the top sublayer in the data link layer of the ISO/IEC 8802 LAN protocol, are described.		
Lev	el of Standardization			
1.	Names of standards development organizations that recognize this standard and/or accredit the owner organization	ANSI, ISO, IEC, IEEE		
	Has this standard been adopted in regulation or legislation, or is it under consideration for adoption?	☐ Yes ⊠ No		
	Has it been endorsed or recommended by any level of government? If "Yes", please describe	☐ Yes ⊠ No		
	Level of Standard (check all that apply)	⊠International ⊠National ⊠Industry ☐de Facto ☐ Single Company		
	Type of document	Standard Report Guide Technical Specification		
	Level of Release	Released In Development Proposed		
Are	eas of Use			
1.	Currently used in which domains? (check all that apply)	☐ Markets ☑ Operations ☐ Service Providers ☐ Generation ☐ Transmission ☐ Distribution ☐ Customer		

	Section I: Use and Application of the Standard		
	Planned for use in which domains? (check all that apply)	☐ Markets ☒ Operations ☐ Generation ☐ Transmis	
	Please describe the Smart Grid systems and equipment to which this standard is applied	All Ethernet-based systems	5
Rel	Relationship to Other Standards or Specifications		
1.	Which standards or specifications standard?	are referenced by this	All Ethernet standards
	Which standards or specifications standard?	are related to this	None
	Which standards or specifications overlap)?	cover similar areas (may	None
	What activities are building on this work?		All Ethernet system use this standards at the lowest level. Typically for "Type I" (connectionless, unacknowledged) communications.
	ot of Energy Smart Grid se describe how this standard may e		ing:
1.	Enables informed participation by	customers	☐ Yes ⊠ No
2.	Accommodates all generation and	storage options	☐ Yes ⊠ No
3.	Enables new products, services ar	nd markets	☐ Yes ⊠ No
4.	Provides the power quality for a ra	nge of needs	☐ Yes ⊠ No
5.	Optimizes asset utilization and ope	erating efficiency	☐ Yes ⊠ No
6.	Operates resiliently to disturbance disasters	s, attacks, and natural	☐ Yes ⊠ No

Pleas	ority Areas Previously Mentioned by FERC se describe if and how this standard may be applied in each of the ction to discuss any other significant areas where the standard is	ne following areas. Note that there is space
1.	Cybersecurity and physical security	☐ Yes ⊠ No
2.	Communicating and coordinating across inter-system interfaces	☐ Yes ⊠ No
3.	Wide area situational awareness	☐ Yes ⊠ No
4.	Smart grid-enabled response for energy demand	☐ Yes ⊠ No
5.	Electric storage	☐ Yes ⊠ No
6.	Electric vehicle transportation	☐ Yes ⊠ No
7.	Advanced metering infrastructure	☐ Yes ⊠ No
8.	Distribution grid management	☐ Yes ⊠ No
Оре	enness	
1.	Amount of fee (if any) for the documentation	\$102
2.	Amount of fee (if any) for implementing the standard	None
3.	Amount of fee (if any) to participate in updating the standard	None
4.	Is the standard documentation available online?	
5.	Are there open-source or reference implementations?	
6.	Are there open-source test tools?	
7.	Would open-source implementations be permitted?	
8.	Approximately how many implementers are there?	All major switch and router vendors, most major OS vendors
9.	Approximately how many users are there?	Not applicable
10.	Where is the standard used outside of the USA?	Used worldwide
11.	Is the standard free of references to patented technology?	⊠ Yes □ No
12.	If patented technology is used, does the holder provide a royalty-free license to users of the standard?	Yes No Not Patented
13.	Can an implementer use the standard without signing a license agreement?	⊠ Yes □ No
14.	Are draft documents available to the public at no cost?	☐ Yes ⊠ No
15.	How does one join the working group or committee that controls the standard?	Membership in IEEE SA is required
16.	Is voting used to decide whether to modify the standard? If Yes, explain who is permitted to vote.	Yes No Anyone is permitted to vote
17.	Is an ANSI-accredited process used to develop the standard?	⊠ Yes ☐ No
18.	What countries are represented in the working group or committee that controls the standard?	Representation is by individual
Support, Conformance, Certification and Testing		

1.	Is there a users group or manufacturers group to support this standard?	Yes No
2.	What is the name of the users group or manufacturers group (if any)?	
3.	What type of test procedures are used to test this standard? (please check all that apply)	☐ Internal to the lab ☐ Published by standards organization ☐ Published by users group ☐ No procedures, informal testing
4.	Are there test vectors (pre-prepared data) used in testing? (please check all that apply)	☐ Internal to the lab ☐ Published by standards organization ☐ Published by users group ☐ No procedures, informal testing
5.	What types of testing programs exist? (check all that apply)	☐ Interoperability Testing ☐ Conformance Testing ☐ Security Testing ☐ No Testing
6.	What types of certificates are issued? (check all that apply)	☐ Interoperability Certificate ☐ Conformance Certificate ☐ Security Certificate (text document) ☐ No Certificates
7.	Are there rules controlling how and when to use the logo?	☐ Yes ☐ No ☒ Standard has no logo
8.	Is there a program to approve test labs?	☐ Yes ⊠ No
9.	Approximately how many test labs are approved (if any)?	None
10.	Is there a defined process for users to make technical comments on the standard or propose changes to the standard and have these issues resolved?	⊠ Yes □ No
11.	Is there a published conformance checklist or table?	⊠ Yes No
12.	Are there defined conformance blocks or subsets?	☐ Yes ⊠ No
13.	Approximately how many vendors provide test tools?	None
14.	Are there tools for pre-certification prior to testing?	☐ Yes ⊠ No
15.	Can vendors self-certify their implementations?	⊠ Yes □ No
16.	Is there application testing for specific uses?	☐ Yes ☒ No ☐ Not applicable
17.	Is there a "golden" or "reference" implementation to test against?	☐ Yes ⊠ No
18.	Who typically funds the testing? (check all that apply)	□ Users Group □ Vendor □ Confidential
19.	Is there a method for users and implementers to ask questions about the standard and have them answered? (check all that apply)	Yes, official interpretations Yes, informal opinions No
20.	Does the users' group (or some other group) fund specific tasks in the evolution of the standard?	☐ Yes ⊠ No
21.	Is the users' group working on integration, harmonization or unification with other similar standards?	☐ Yes ⊠ No

22.	What other standards is this standard being integrated, harmonized, or unified with (if any)?			
23.	Are there application notes, implementation agreements, or guidelines available describing specific uses of the standard?	☐ Yes ⊠ No ☐ Not applicable		
_	J. Notes Please present here any additional information about the standard that might be useful:			
1.	This standard defines the LLC (Logical Link Control) layer of LAStd 802.3 defines the frame format as <destination address="">< Std 802.2 breaks down <payload> into the IEEE frame format <dsap><ssap><control><payload> where DSAP declares the When the Length/Type field is less than 2048. When the Length/Type field is greater than 2047, the frame for Type/Length field as the next upper layer protocol identifier. The format of 802.2.</payload></control></ssap></dsap></payload></destination>	Source Address> <length type=""><payload> of: ne next upper layer protocol is "DIX Ethernet" which uses the</payload></length>		

	Section II: Functional Descripti	on of the Standard	
	dWise Architecture: Layers		
	se identify which layers this standard specifies, as described in		
	/www.gridwiseac.org/pdfs/interopframework_v1_1.pdf, and the ping to the Open Systems Interconnect (OSI) model is approxing.		
1.	Layer 8: Policy	☐ Yes ⊠ No	
2.	Layer 7: Business Objectives	☐ Yes ⊠ No	
3.	Layer 6: Business Procedures	☐ Yes ⊠ No	
4.	Layer 5: Business Context	☐ Yes ⊠ No	
5.	Layer 4: Semantic Understanding (object model)	☐ Yes ⊠ No	
6.	Layer 3: Syntactic Interoperability (OSI layers 5-7)	☐ Yes ⊠ No	
7.	Layer 2: Network Interoperability (OSI layers 3-4)	☐ Yes ⊠ No	
8.	Layer 1: Basic Connectivity (OSI layers 1-2)	⊠ Yes □ No	
Pleas ques	dWise Architecture: Cross-Cutting Issues se provide an explanation in the box beside the heading for any tion is not applicable because the function is provided in anothe idates. Note that "the standard" refers to the technology specifi	er layer or standard, please suggest any likely	
them	selves.		
	Shared Meaning of Content		
1.	Do all implementations share a common information model?	☐ Yes ⊠ No ☐ Not applicable	
2.	Can data be arranged and accessed in groups or structures?	Yes No Not applicable	
3.	Can implementers extend the information model?	☐ Yes ☐ Not applicable	
4.	Can implementers use a subset of the information model?	⊠ Yes ☐ No ☐ Not applicable	
	Resource Identification		
5.	Can data be located using human-readable names?	☐ Yes ☒ No ☐ Not applicable	
6.	Can names and addresses be centrally managed without human intervention?	☐ Yes ☐ No ☒ Not applicable	
	Time Synchronization and Sequencing		
7.	Can the standard remotely synchronize time?	☐ Yes ☐ No ☐ Provided in another layer	
8.	Can the standard indicate the quality of timestamps?	Yes No Provided in another layer	
	Security and Privacy		
9.	Where is security provided for this standard?	☐ Within this standard☒ By other standards	
10.	Does the standard provide authentication?	☐ Yes ⊠ No	
11	Does the standard permit role-based access control?	☐ Yes ⊠ No	

	Section II: Functional Descripti	on of the Standard
12.	Does the standard provide encryption?	☐ Yes ⊠ No
13.	Does the standard detect intrusions or attacks?	☐ Yes ⊠ No
14.	Does the standard facilitate logging and auditing of security events?	☐ Yes ☒ No
15.	Can the security credentials be upgraded remotely?	Yes No No Credentials
16.	Can the security credentials be managed centrally?	Yes No No Credentials
17.	Please list any security algorithms and standards used	
18.	Please provide additional information on how the standard addresses any "Yes" answers above	
19.	Please provide additional information about why any of the questions listed above do not apply to this standard	The standard deals with addressing only. Payload data payload is not discussed.
	Logging and Auditing	
20.	Does the standard facilitate logging and auditing of critical operations and events?	☐ Yes ⊠ No
21.	Can the standard gather statistics on its operation?	☐ Yes ☐ No ☒ Not applicable
22.	Can the standard report alerts and warnings?	⊠ Yes ☐ No ☐ Not applicable
	Transaction State Management	
23.	Can the standard remotely enable or disable devices or functions?	☐ Yes ☒ No ☐ Not applicable
	System Preservation	
24.	Can the standard automatically recover from failed devices or links?	☐ Yes ☒ No ☐ Not applicable☐ Provided in another layer
25.	Can the standard automatically re-route messages?	☐ Yes ☒ No ☐ Not applicable ☐ Provided in another layer
26.	Can the standard remotely determine the health (as opposed to just connectivity) of devices or software?	☐ Yes ☑ No ☐ Not applicable
	Other Management Capabilities	
	Please describe any other system or network management capabilities the standard provides.	
	Quality of Service	
27.	Is data transfer bi-directional?	☐ Yes ⊠ No
28.	Can data be prioritized?	☐ Yes ☐ No ⊠ Not applicable
29.	What types of reliability are provided?	Reliable Non-guaranteed Both Either Provided in another layer
30.	Can information be broadcast to many locations with a single transmission?	⊠ Yes □ No □ Not applicable
	Please describe any other methods the standard uses to manage quality of service.	Flow control is defined but not used in most common frame types
	Discovery and Configuration	
31.	Can the software or firmware be upgraded remotely?	☐ Yes ☐ No ☒ Not applicable

	Section II: Functional Description of the Standard			
32.	Can configuration or settings be upgraded remotely?	☐ Yes ☐ No ☒ Not applicable		
33.	Can implementations announce when they have joined the system?	☐ Yes ☒ No ☐ Not applicable		
34.	Can implementations electronically describe the data they provide?	☐ Yes ☑ No ☐ Not applicable		
	System Evolution and Scalability			
35.	What factors could limit the number of places the standard could be applied?	No limits		
36.	What steps are required to increase the size of a system deploying this standard?			
37.	Is the information model separate from the transport method?	☐ Yes ⊠ No		
38.	Does the standard support alternate choices in the layers(s) below it?	⊠ Yes ☐ No ☐ No layers below		
39.	List the most common technology choices for layers implemented below this standard	All MAC/PHY layers are supportable		
40.	Does the standard support multiple technology choices in the layers above it?	⊠ Yes ☐ No ☐ No layers above		
41.	List the technologies or entities that would most commonly use this standard in the layer above	Link layer protocols and ISO-based protocols		
42.	Please describe any mechanism or plan to ensure the standard is as backward-compatible as possible with previous versions	No new applications are envisioned		
43.	Please describe how the design of this standard permits it to be used together with older or legacy technologies	Length/Type field compatible with older DIX (Digital/Intel/Xerox) Ethernet and 802.2 frame formats.		
44.	Please describe how the design of this standard permits it to co-exist on the same network or in the same geographic area with similar technologies, and give examples	Devices receiving frames de-multiplex frames based upon the Length/Type field. Users commonly mix these frame types even on adjacent frames.		
45.	Electromechanical			
	chitectural Principles se describe how this standard may apply any of these principles	s:		
1.	Symmetry – facilitates bi-directional flow of energy and information	Protocol is completely symmetrical. 802.2 frames always have both destination and source addresses present (DIX Ethernet frames are not 100% symmetric though)		
2.	Transparency – supports a transparent and auditable chain of transactions			
3.	Composition – facilitates the building of complex interfaces from simpler ones			
4.	Loose coupling – can support bilateral and multilateral transactions without elaborate pre-arrangement			

	Section II: Functional Description of the Standard		
5.	Shallow integration – does not require detailed mutual information to interact with other components	802.2 defines only the 3-4 byte header of a frame without discussion of how layers above and below would use the payload.	
6.	Please list any other architectural models, reference architectures or frameworks this standard was designed to be compliant with, e.g. W3C, IEC TC57, OSI and how it fits those models	This technology is part of OSI layer2
